ANYTHING YOU'RE THINKING ABOUT AI.

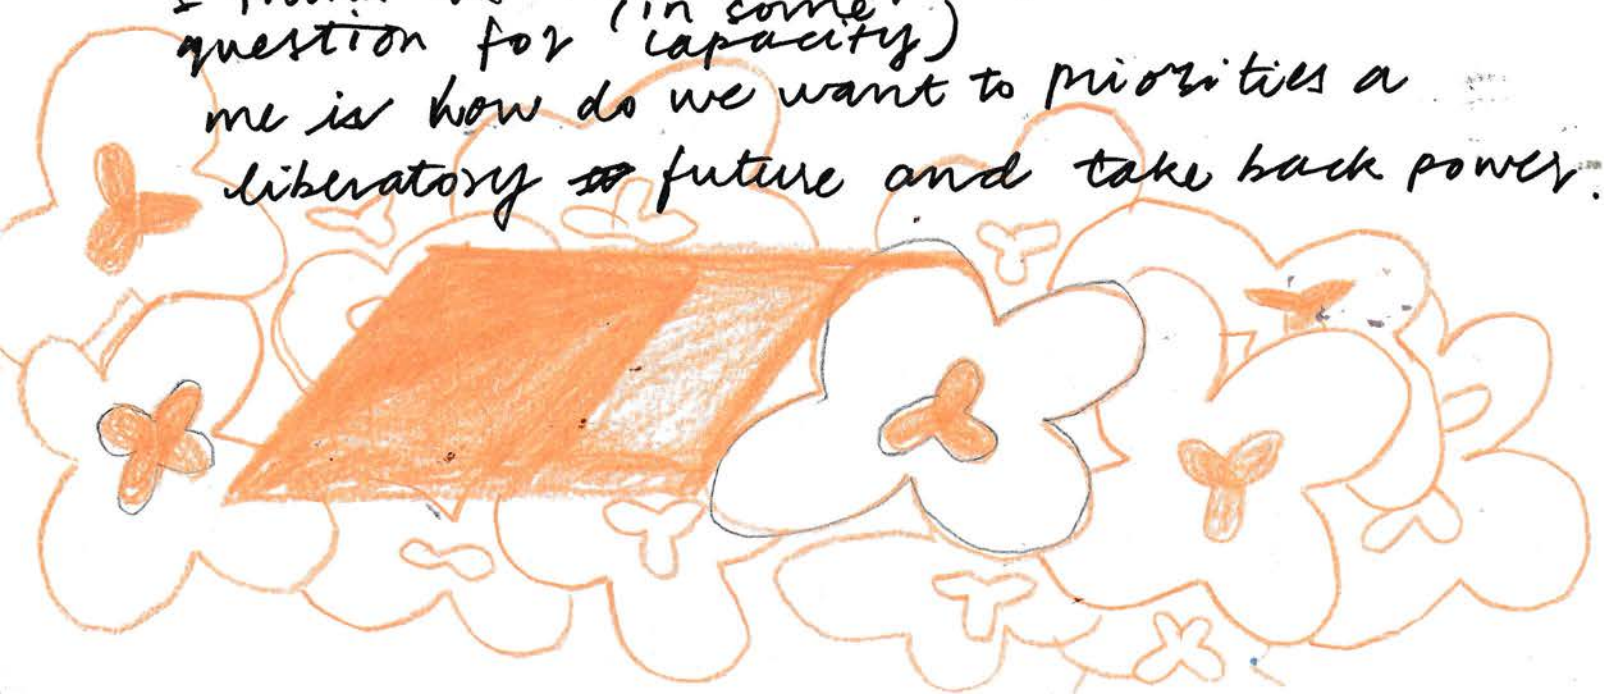
I'm worried about a lot of things wrt AI.

- environmental impact,
  & how its seemingly in a technofascist manner taking over a lot of human culture & infrastructure.
- I work w a network of people working to research Ethical AI & ~~its~~ one of the committee members was on a working group on how AI is getting adopted by the state & city gov'ts. Its seems like the gov'ts are funding AI and their unfettered support for automation ~~wit~~ while defunding public services & widening the divide in who is being served.

  [AIAI (Atlanta Interdisciplinary Artifical Intelligence Network)]

I am also concerned about labor and exploitation that the managerial class seems to be enabled by AI to do.

I use it for many things day-to-day & I think its here to stay, so I think the question for me (in some capacity) is how do we want to prioritize a liberatory ~~to~~ future and take back power.



- negative ~~examples~~
  impact of AI on schoolchildren (calculator instruction)

- digital artifacts in a non commercial setting
  ↳ you can do so much!

Avneesh:

how do you get people to give a shit?

- being in ctrl of the tool. what is the +ve future of these tools, that will stick in the collective consciousness

- doom $\xrightarrow{\text{vs}}$ radicalizing people

APRIL 11 w Nuwan and friends.

Matteo Pasell — ?

"The future doesnt repeat history but it rhymes"

"we done need coding" vs "vibe coding is the future"

is everyone more capable now?

Nathan:

actual vs ideal usage of AI

doom as a marketing strategy

vs

hyperlocal, consensual, green, bespoke,

tactically speaking how do we get to this?

observing what it does to people and what it does to me — creating friction in using it.

tool that is a layer on everything now

'rhetoric that AI is bad'

How can it be repurposed in strategic ways?

Can we use it in ways that is a 'counter strategy' to how bigtech uses it?

Effect on imagination?

[Ruha Benjamin?]

parroting everything

aarushi

thoughts about AI

A LOOOOOOOT

→ how can this thing "AI" be a more considered tool, and not plastered propogated and patched over everything we encounter

is (low tech AI) possible?

how do I / can I control how I use it?

AI = BAD → maybe

but I'm concerned with non big tech ways

LM STUDIO

STRATEGIC use in → REPURPOSE AI? HOW?

→ WHY? Seemed cool

→ A good conversation → → → maybe can collab with / in different ways

→ ATM → a lot

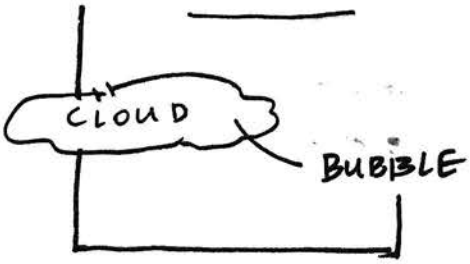
BUT, I'm concerned about how I can find better ways to use this tool that can ~~[illegible]~~ and simultaneously not use my skills/positionality/and or

A support group ?! //

concerned with the invisible, and how does that affect imagination

"Trade School" →

SKEPTIC — POSITIVIST



We might be a STUDY GROUP ?!

military use, surveillance → alt

$!$! → where's it at?

TOOL

operational scale of

"Bespoke"

TOY or TOOL

LOCAL

/SUPPORT TO DO INTERESTING WORK

ethics

but beyond that

I'm interested in how it changes and affects society / culture

AI SLOP

I hate how something beautiful like machine learning has been focused on creating more behemoths in the cloud

I like having a droid that does mostly what I want and I can use it to build stacks of stupid ideas that are all mine.

have ARE key I hate to think more and more personal data is getting freely sucked into the ~~[illegible]~~ structure that only benefits a few people with little interest in the impacts

In the classroom we have been able to get students learning code without coding

Low tech / low power / optimised LLMs are the future, and now

Imagination ...

AI ????

It has charged, evolved, so damn fast. It used to be this mysterious thing that I started studying in undergrad because it sounded like sci-fi, and you could do crazy predictions and stuff. And it still kind of is that, but now you can also generate a video of Trump and Putin hugging while riding a bear in less than 30 seconds.

I think it's scary. I think it's amazing. I think it can make us dumber. I think it can make us capable of so many things. I'm not even going to get into the ethics of building these systems, that's a whole other thing. I think it will benefit greatly a few people, and do the opposite with a lot more.

- individually, its an amazing time to be a person who makes digital things non-commercially

- how do you get people to give a shit - more often, more deeply, and about more things? AI brainrot concerns seem downstream of this
  - modulo capitalist engagement maxing product design?
  - but if you have the above, does the second matter

- what is the positive future of these new capabilities? how do we use that to actionably shape targetted criticisms so they stick in the zeitgeist? degrowth messaging doesn't last for long

- I want to hear what educators are seeing from their students

- want to read more marxist and historical frankfurt school type material cultural analysis around software and automation

city-state - AI (atlanta)

- automating / money.
- environmental data center!
- AI - progress / success.
- labor market - productivity.

- AI is so fast / damn (weird sci-fi perdiction)
- scary - amazing / double-edged sword.

→ ~~the only thing~~ most ppl will not get the positive impact, the negative impact

(adapt)

→ how to make people give a shit!

→ material analysis - we dont need to learn anymore!
- operational scale issues.

→ ~~actual is~~

data is stolen - doom cycle
energy - marketing strategy

(Gemini CLI)

↕

private, green, local, esoteric AI.

(TOY!)

low tech AI - repurposed gorillaz

counter strategy — imagination
